# Chapter 1

## Namespace Index

### 1.1 Namespace List

Here is a list of all documented namespaces with brief descriptions:

<a href="#">robowar</a>	RoboWar namespace . . . . .	7
-------------------------	-----------------------------	---

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

robowar::Cell . . . . .	10
robowar::Coord . . . . .	11
robowar::Message . . . . .	11
robowar::Object . . . . .	13
robowar::Base . . . . .	9
robowar::Robot . . . . .	14
robowar::RobotController . . . . .	15

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">robowar::Base</a>		
<a href="#">Base</a> interface	. . . . .	9
<a href="#">robowar::Cell</a>		
<a href="#">Cell</a> interface	. . . . .	10
<a href="#">robowar::Coord</a>		
<a href="#">Coord</a> class	. . . . .	11
<a href="#">robowar::Message</a>		
<a href="#">Message</a> interface	. . . . .	11
<a href="#">robowar::Object</a>		
<a href="#">Object</a> interface	. . . . .	13
<a href="#">robowar::Robot</a>		
<a href="#">Robot</a> interface	. . . . .	14
<a href="#">robowar::RobotController</a>		
<a href="#">Robot</a> controller interface	. . . . .	15

## Chapter 4

# Namespace Documentation

### 4.1 robowar Namespace Reference

RoboWar namespace.

#### Classes

- class [Base](#)  
*Base* interface.
- class [Cell](#)  
*Cell* interface.
- class [Coord](#)  
*Coord* class.
- class [Message](#)  
*Message* interface.
- class [Object](#)  
*Object* interface.
- class [Robot](#)  
*Robot* interface.
- class [RobotController](#)  
*Robot* controller interface.

#### Enumerations

- enum [Direction](#) {  
    [DIR\\_NONE](#) = 0, [DIR\\_NORTH\\_EAST](#), [DIR\\_EAST](#), [DIR\\_SOUTH\\_EAST](#),  
    [DIR\\_SOUTH\\_WEST](#), [DIR\\_WEST](#), [DIR\\_NORTH\\_WEST](#) }  
*Direction of movement.*

#### 4.1.1 Detailed Description

RoboWar namespace.

## 4.1.2 Enumeration Type Documentation

### 4.1.2.1 Direction

```
enum robowar::Direction
```

Direction of movement.

Direction of movement from a (pointy topped) hex cell.

#### Enumerator

DIR_NONE	No movement.
DIR_NORTH_EAST	North-east.
DIR_EAST	East.
DIR_SOUTH_EAST	South-east.
DIR_SOUTH_WEST	South-west.
DIR_WEST	West.
DIR_NORTH_WEST	North-west.

## Chapter 5

# Class Documentation

### 5.1 robowar::Base Class Reference

[Base](#) interface.

Inheritance diagram for robowar::Base:

#### Public Member Functions

- virtual bool [isActive](#) () const =0  
*Check if the base is active, i.e. produce robots.*
- virtual int [getConstructionCooldown](#) () const =0
- virtual int [getMaxConstructionCooldown](#) () const =0  
*Get maximum robot construction cooldown of the base.*

#### 5.1.1 Detailed Description

[Base](#) interface.

Interface for interaction with a robot base.

## 5.1.2 Member Function Documentation

### 5.1.2.1 getConstructionCooldown()

```
virtual int robowar::Base::getConstructionCooldown ( ) const [pure virtual]
```

Get current robot construction cooldown of the base. Zero cooldown means that the base can produce a robot.

## 5.2 robowar::Cell Class Reference

[Cell](#) interface.

### Public Member Functions

- virtual [Coord](#) [getCoord](#) () const =0  
*Get coordinate of the cell.*
- virtual bool [isEmpty](#) () const =0  
*Check if the cell is empty (has no object on it).*
- virtual bool [isRobotHere](#) () const =0  
*Check if there is a robot on the cell.*
- virtual bool [isBaseHere](#) () const =0  
*Check if there is a base on the cell.*
- virtual [Robot](#) \* [getRobot](#) () const =0
- virtual [Base](#) \* [getBase](#) () const =0

### 5.2.1 Detailed Description

[Cell](#) interface.

Interface for a (hexagonal) cell on a game map.

## 5.2.2 Member Function Documentation

### 5.2.2.1 getBase()

```
virtual Base* robowar::Cell::getBase ( ) const [pure virtual]
```

Get base on the cell.

#### Returns

base or null if there is no base.

## 5.2.2.2 getRobot()

```
virtual Robot* robowar::Cell::getRobot ( ) const [pure virtual]
```

Get robot on the cell.

## Returns

robot or null if there is no robot.

## 5.3 robowar::Coord Class Reference

Coord class.

## Public Member Functions

- [Coord](#) ()  
*Default constructor (components are set to zeroes).*
- [Coord](#) (int col, int row)  
*Constructor.*
- int [getCol](#) () const  
*Get column (x).*
- int [getRow](#) () const  
*Get row (y).*
- int [getX](#) () const  
*Get x (column).*
- int [getY](#) () const  
*Get y (row).*
- [Coord plus](#) (const [Coord](#) &coord) const  
*Get sum of this coord and given coord.*
- [Coord atDirection](#) (const [Direction](#) &dir) const  
*Get neighbor coord obtained by moving from this coord in given direction.*
- int [distanceTo](#) (const [Coord](#) &dest) const  
*Get distance from this coord to given coord.*
- [Direction directionTo](#) (const [Coord](#) &dest) const  
*Get approximate direction from this coord to given coord.*

## 5.3.1 Detailed Description

[Coord](#) class.

Represents coordinate of a hex cell on a game map as (column, row) or (x, y).

## 5.4 robowar::Message Class Reference

[Message](#) interface.

## Public Member Functions

- virtual int [getSize](#) () const =0
- virtual void [write](#) (int index, int value)=0  
*Write integer value by given index.*
- virtual int [read](#) (int index) const =0
- virtual void [clear](#) ()=0  
*Init message by zeroes.*
- virtual void [copy](#) ([Message](#) \*msg)=0  
*Copy given message.*

### 5.4.1 Detailed Description

[Message](#) interface.

Interface for a message in robot interactions.

### 5.4.2 Member Function Documentation

#### 5.4.2.1 [getSize\(\)](#)

```
virtual int robowar::Message::getSize ( ) const [pure virtual]
```

Get message size.

#### Returns

message size in integers.

#### 5.4.2.2 [read\(\)](#)

```
virtual int robowar::Message::read (
    int index ) const [pure virtual]
```

Read integer value by given index.

#### Returns

value or zero if index is out of range.

## 5.5 robowar::Object Class Reference

[Object](#) interface.

Inheritance diagram for robowar::Object:

### Public Member Functions

- virtual [Coord](#) [getCoord](#) () const =0  
*Get coordinate of the object.*
- virtual int [getTeamId](#) () const =0
- virtual bool [isEnemy](#) () const =0  
*Check if the object is an enemy (belongs to another team).*
- virtual bool [isNeutral](#) () const =0  
*Check if the object is neutral (has no team).*
- virtual int [getDistanceTo](#) () const =0  
*Get distance to the object.*
- virtual bool [isInViewRange](#) () const =0  
*Check if the object is in view range.*
- virtual bool [isInShootRange](#) () const =0  
*Check if the object is in shoot range.*
- virtual bool [isInTransmitRange](#) () const =0  
*Check if the object is in transmit range.*
- virtual int [getHitpoints](#) () const =0  
*Get current hitpoints of the object.*
- virtual int [getMaxHitpoints](#) () const =0  
*Get maximum hitpoints of the object.*

### 5.5.1 Detailed Description

[Object](#) interface.

Interface for a general map object (robot, base, etc.).

## 5.5.2 Member Function Documentation

### 5.5.2.1 `getTeamId()`

```
virtual int robowar::Object::getTeamId ( ) const [pure virtual]
```

Get id of the object's team.

#### Returns

team's id or -1 if object has no team.

## 5.6 `robowar::Robot` Class Reference

[Robot](#) interface.

Inheritance diagram for `robowar::Robot`:

### Public Member Functions

- virtual int [getWeaponCooldown](#) ( ) const =0
- virtual int [getMaxWeaponCooldown](#) ( ) const =0
  - Get maximum weapon cooldown of the robot.*
- virtual int [getViewDistance](#) ( ) const =0
  - Get view range of the robot.*
- virtual int [getShootDistance](#) ( ) const =0
  - Get shoot range of the robot.*
- virtual int [getTransmitDistance](#) ( ) const =0
  - Get transmit range of the robot.*
- virtual bool [canShoot](#) ( ) const =0
  - Check if the robot can shoot now.*

### 5.6.1 Detailed Description

[Robot](#) interface.

Interface for interaction with a robot.

### 5.6.2 Member Function Documentation

#### 5.6.2.1 getWeaponCooldown()

```
virtual int robowar::Robot::getWeaponCooldown ( ) const [pure virtual]
```

Get current weapon cooldown of the robot. Zero cooldown means that the robot can shoot.

## 5.7 robowar::RobotController Class Reference

[Robot](#) controller interface.

Inheritance diagram for robowar::RobotController:

## Public Member Functions

- virtual int [getNumOfRobotsInView](#) () const =0  
*Get number of other robots in this robot's view range.*
- virtual int [getNumOfBasesInView](#) () const =0  
*Get number of bases in this robot's view range.*
- virtual [Robot](#) \* [getRobotInView](#) (int index) const =0
- virtual [Base](#) \* [getBaseInView](#) (int index) const =0
- virtual int [getNumOfMessages](#) () const =0  
*Get number of incoming messages.*
- virtual [Message](#) \* [getMessage](#) (int index) const =0
- virtual [Message](#) \* [getOwnMessage](#) () const =0  
*Get own message.*
- virtual [Message](#) \* [getMemory](#) () const =0  
*Get own memory.*
- virtual bool [isShooting](#) () const =0  
*Check if robot will attempt to shoot.*
- virtual bool [isMoving](#) () const =0  
*Check if robot will attempt to move.*
- virtual bool [isTransmitting](#) () const =0  
*Check if robot will attempt to transmit.*
- virtual bool [canMoveAt](#) (int direction) const =0
- virtual bool [canShootAt](#) (const [Coord](#) &coord) const =0
- virtual void [moveAt](#) (int direction)=0
- virtual void [moveTo](#) (const [Coord](#) &coord)=0
- virtual void [shootAt](#) (const [Coord](#) &coord)=0
- virtual void [transmit](#) ()=0
- virtual void [cancelMove](#) ()=0  
*Cancel move attempt.*
- virtual void [cancelShoot](#) ()=0  
*Cancel ahoot attempt.*
- virtual void [cancelTransmit](#) ()=0  
*Cancel transmit attempt.*
- virtual bool [cellExists](#) (const [Coord](#) &coord) const =0
- virtual [Cell](#) \* [getCell](#) (const [Coord](#) &coord)=0

### 5.7.1 Detailed Description

[Robot](#) controller interface.

Interface to control a robot in a robot script.

### 5.7.2 Member Function Documentation

#### 5.7.2.1 canMoveAt()

```
virtual bool robowar::RobotController::canMoveAt (
    int direction ) const [pure virtual]
```

Check if robot can move to neighbor cell in given direction.

##### Returns

true if movement is possible, false otherwise. Movement cannot be made if there is no cell in given direction or the cell is occupied by a base. If there is a robot on the neighbor cell, movement is possible, assuming that the robot will free the cell.

#### 5.7.2.2 canShootAt()

```
virtual bool robowar::RobotController::canShootAt (
    const Coord & coord ) const [pure virtual]
```

Check if robot can shoot at the cell with the given coord.

##### Returns

true if shooting is possible, false otherwise. Shooting cannot be made if there is no cell with given coordinate.

#### 5.7.2.3 cellExists()

```
virtual bool robowar::RobotController::cellExists (
    const Coord & coord ) const [pure virtual]
```

Check if cell with given coordinate exists.

##### Returns

true if cell is in view range and exists, false otherwise. Only cells in this robot's view range can be checked for existence.

#### 5.7.2.4 getBaseInView()

```
virtual Base* robowar::RobotController::getBaseInView (
    int index ) const [pure virtual]
```

Get base in view by given index.

##### Returns

base or null if index is out of range.

#### 5.7.2.5 `getCell()`

```
virtual Cell* robowar::RobotController::getCell (
    const Coord & coord ) [pure virtual]
```

Get cell in view range.

##### Returns

cell or null if cell doesn't exist or out of view range.

#### 5.7.2.6 `getMessage()`

```
virtual Message* robowar::RobotController::getMessage (
    int index ) const [pure virtual]
```

Get incoming message by index.

##### Returns

message or null if index is out of range.

#### 5.7.2.7 `getRobotInView()`

```
virtual Robot* robowar::RobotController::getRobotInView (
    int index ) const [pure virtual]
```

Get robot in view by given index.

##### Returns

robot or null if index is out of range.

#### 5.7.2.8 `moveAt()`

```
virtual void robowar::RobotController::moveAt (
    int direction ) [pure virtual]
```

Attempt to move in given direction. If movement isn't possible, it will be cancelled.

#### 5.7.2.9 moveTo()

```
virtual void robowar::RobotController::moveTo (
    const Coord & coord ) [pure virtual]
```

Attempt to move in direction to given coordinate. If movement isn't possible, it will be cancelled.

#### 5.7.2.10 shootAt()

```
virtual void robowar::RobotController::shootAt (
    const Coord & coord ) [pure virtual]
```

Attempt to shoot at the cell with given coordinate. If shooting isn't possible, it will be cancelled.

#### 5.7.2.11 transmit()

```
virtual void robowar::RobotController::transmit ( ) [pure virtual]
```

Start transmission. The content of own message will be transmitted. [Message](#) will be transmitted to ally robots in transmit range and become available to them on the next iteration.
